

propatech® vci bol

To solve problems
caused by:

Corrosion

Oxydation

Economy, protection, ecology: one product, three functions!

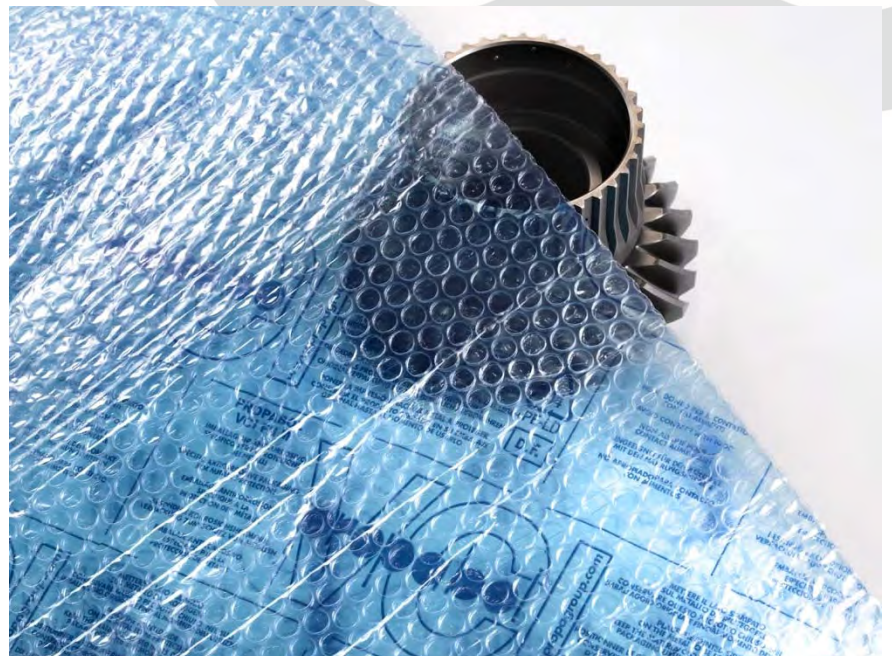

PROPATECH VCI BOL is an innovative idea made with **PROPATECH VCI** technology for the whole protection of the quality of your products. **PROPATECH VCI BOL** is made by coupling the air-bubble polyethylene with **PROPATECH VCI FILM** (coextruded polyethylene film with additional VCI inhibitors), so that to obtain a protection both against impacts and corrosion.

These two combined materials enable **PROPATECH VCI BOL** to simultaneously protect your products from:

- Corrosion
- impacts
- pieces rubbing inside the cases

Three fundamental functions in one completely recyclable material.

Furthermore, as a result of its transparency, **PROPATECH VCI BOL** enables you to always correctly position the goods to be protected.

Unlike the old oiling and greasing systems, the **PROPATECH VCI** anti-corrosive protection system is more practical, cheaper and less pollutant.

As soon as the package is opened, the item is ready to use and therefore does not require to be pickled or washed to remove product residues.

PROPATECH VCI BOL is available in:

- Rolls
- Sheets
- Bags

PROPATECH VCI BOL is an effective, brilliant solution!
