

The missing ring...

Protection during handling

PROPARING is a plastic ring specially designed to permit safe handling while simultaneously avoiding damage such as dents or scoring in the innermost wraps of the handled steel roll.

During internal handling procedures in steel mills and service centres, steel rolls are moved repeatedly and the use of overhead cranes or forklifts often causes damage in the lifting points. It is actually to prevent such damage that Propack, in mutual agreement with loyal customers in the steel sector, has developed **PROPARING**.

Customers often complain about not being able to use a steel roll to the very end because the last wraps, which can also mean many metres of length, were irremediably damaged during handling. With **PROPARING** this problem will be **definitely solved**.

PROPARING is reusable, so it performs an important service and solves a long-standing problem at decidedly laughable costs.

The available diameters correspond to those most frequently found in steel mills.

Advantages:

Safe handling

Advantages:

- Recyclable
- Reusable
- Resistant
- Flexible

INSIDE DIAMETER	mm	508 ± 1	610 ± 1
OUTSIDE DIAMETER	mm	885 ± 1	885 ± 1

The shown values have been obtained with materials normally available on the market and just as informative nature, intended to permit better knowledge of the material, but they do not represent specifications.
