

# propasteel® vci

To solve problems caused by:

Corrosion

Oxydation

## High resistance with less thickness!

**PROPASTEEL** is a coextruded plastic film made from special resins that render it resistant to punctures and tears. An extremely high level of resistance on corners and along edges, makes **PROPASTEEL** particularly suitable for packaging tubes, coils, and machinery with sharp or protruding parts. Moreover, apart from mechanically protecting metals, **PROPASTEEL** can safeguard against corrosion when treated with **PROPATECH VCI** system, which is particularly important for a wide range of goods.

Compared to traditional metal packaging materials, **PROPASTEEL** is a highly innovative product. Besides its very high resistance and unlike its old counterparts, it is 100% recyclable and can be easily welded, this means that packages can be air-tightly sealed.

**PROPASTEEL** is also economically very convenient because, though its limited thickness, it still ensures an extremely high level of resistance thus making the cost per square metre highly competitive. **PROPASTEEL** therefore guarantees a much higher rate of productivity per kg compared to other products on the market.

### Advantages:

- Highly resistant; especially for corners or edges
- Low permeability
- 100% recyclable
- Easy to use
- It can be used to package rolls, tubes and steel or metal forms
- High efficiency with low cost

Developed in close collaboration with our high-valued customers, this breakthrough packaging material has been studied to put an end to the age-old problems of steel and metal packaging.

## propasteel®vci plus

**NEW**

The last product born in Propagroup research laboratories. It stands out for its very good performances:

- More mechanical resistance
- Low permeability
- More anticorrosive protection

**PROPASTEEL** is usually supplied on reels but, if required, it can be shipped in sheets, sacks or caps with gusset. **PROPASTEEL** can also be personalized both in graphics and colour (standard colour blue).
