

# propatech® vci stretch

To solve problems caused by:

Corrosion

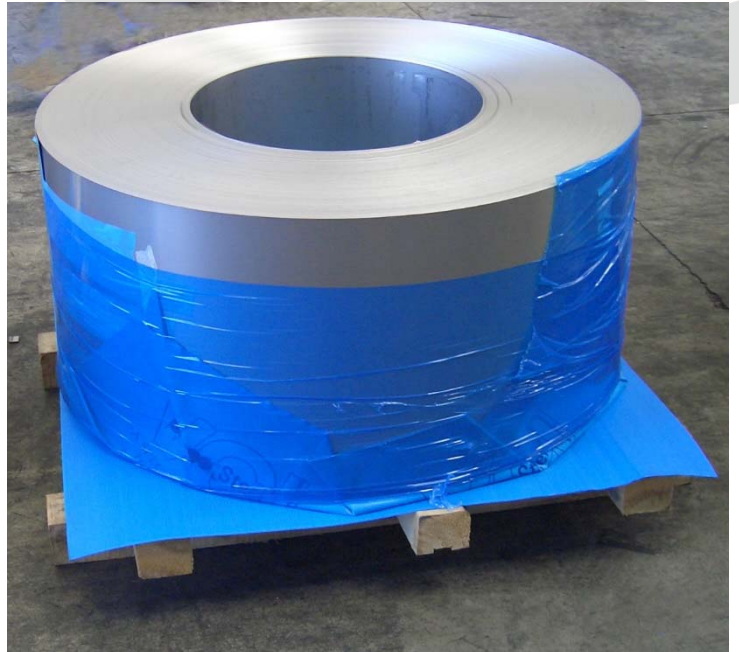

Oxydation

## Against corrosion, a second skin

**PROPATECH VCI STRETCH** is a coextruded extendible film with the added **PROPATECH VCI** anti-corrosive system. The products of the **PROPATECH VCI** range are made by introducing the **PROPATECH VCI** additive into the still melted material during the film coextrusion phase. The additive is then able to sublime from the plastic, guaranteeing protection from the corrosion of the packed metallic details.

**PROPATECH VCI STRETCH** is particularly suitable for the automatic or manual packaging of metallic items to protect from corrosion, especially steel reels, bars and tubes.

The high quality resins used for the production grant extremely high performances in terms of resistance, also for plates with extremely sharp edges. The elastic memory of **PROPATECH VCI STRETCH** allows the product to be fully bound, granting it a "second skin" able to prevent any oxidation process

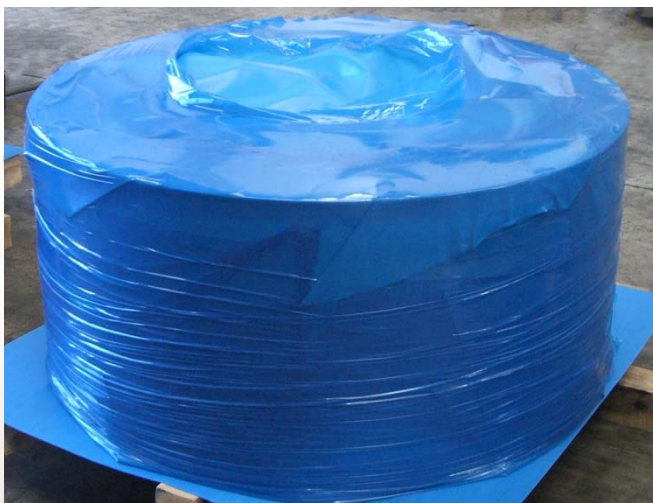

**propatech<sup>®</sup>vci**  
stretch

Unlike the old oiling and greasing systems, the anti-corrosive protection system **PROPATECH VCI** is:

- more practical
- cheaper
- less pollutant
- 100% recyclable
- 

Essentially, when the packaging is opened, the item is ready to be used and it does not require to be stripped or washed.
